2. Theory

2.1. Java Server Pages – JSP

JSP is a server-side technology that does all the processing at server. It is used for creating dynamic web applications, using java as programming language. This JSP pages consist with HTML and JSP tags. In JSP we can embed java code in HTML using JSP tags.

Advantages of JSP

- Easy to maintain than servlet.
- Pages can be directly accessed.
- JSP clearly separate Presentation logic from Business logic.
